PROFESSIONAL SUMMARY

Information Technology student at National University–MOA with hands-on experience developing web and mobile applications through academic projects. Familiar with Java, Kotlin, MySQL, and Android Studio, with experience in application development, data management, and team collaboration. Interested in Software Quality Assurance and Web Development.

EDUCATION

BACHELOR OF SCIENCE IN INFORMATION TECHNOLOGY Aug 2023 – Present

National University – MOA

Coral Way, SM Mall of Asia Complex, Pasay City, Metro Manila, Philippines

SKILLS

- **Programming Languages:** Java, Kotlin, JavaScript, Python
- **Web Technologies:** HTML, CSS, Tailwind CSS
- **Database Management:** MySQL
- **Tools:** Android Studio, VS Code
- **Methodologies:** Agile Methodologies
- **Soft Skills:** Team Collaboration, User Experience (UX) Design, Problem-Solving, Communication

PROJECTS

ITECHS – Learning Management System January 2026 – Present

Programmer

- Developed a gamified web and mobile learning platform for students, teachers, and administrators.
- Implemented educational games, quizzes, progress tracking, and leaderboards to enhance student engagement.
- Built teacher and administrator features for managing users, learning content, and student performance.
- Conducted functional testing and debugging to identify issues and verify system features.

Morrow – Task Management System October 2026 – Present

Programmer

- Developed a task management system for users to efficiently organize and manage tasks.
- Implemented task-sharing functionality, facilitating team collaboration and improving project completion rates.
- Integrated private task management options for users to manage personal tasks separately from shared tasks.
- Implemented task creation, editing, and deletion functionalities for task management.

PetAdopt – Mobile Application February 2025 – March 2025

Programmer

- Developed a mobile application for pet adoption using Kotlin and Android Studio, enhancing access to pet adoption services.
- Collaborated with a two-member team to build application features, contributing to improved usability.
- Developed interactive application screens and navigation features to improve user experience.

Hospital Queuing Management System October 2024 – November 2024

Programmer

- Developed a hospital queuing management system using Java and MySQL to manage patient queues, organize waiting lists, and maintain patient records.
- Integrated MySQL database operations to support patient information storage, retrieval, and updates.

Library Management System May 2024 – June 2024

Programmer

- Developed a Java-based Library Management System with book record management, borrowing, returns, and penalty tracking features.
- Implemented database operations for book availability, borrowing transactions, and return records.
